List of figures and tables *xi*
Preface *xvii*
About the author *xxi*

1 Introduction **1**
What is an academic search engine? 3
Challenges for an academic search engine 3
The evolution of academic search engines 6
Future perspectives 8

2 CiteSeer^x: a scientific engine for scientists **11**
Autonomous citation indexing 12
A focus on computer science 13
A searchable digital library 15
Searching for authors and citations 17
Parsing mistakes 20
Other 'Seers': the CiteSeer^x lab 24
A pioneer in citation indexing 27

3 Scirus: a multi-source searcher **29**
Web pages and authoritative sources 30
Crawling and data extraction 39
Source filtering 41
Ranking on links 43
A missed opportunity 44

4	**AMiner: science networking as an information source**	**47**
	A networked engine	48
	A chaotic design	49
	Based on bibliographic databases	57
	Searching only in documents	58
	Exhaustive author profiles	61
	PatentMiner	67
	A half-academic search engine	68
5	**Microsoft Academic Search: the multi-object engine**	**71**
	The object-level vertical search engine	73
	Slow content updating speed	74
	Filtering across the directory	79
	A multidimensional ranking	81
	A composition based on profiles	82
	Visualization: graphs as research assessment tools	103
	More a directory than an engine	106
6	**Google Scholar: on the shoulders of a giant**	**109**
	A specialization of Google	110
	Feeding back its own sources	111
	The opacity of results	119
	Google Scholar's additional services	124
	The most exhaustive academic search engine	138
7	**Other academic search engines**	**143**
	BASE	144
	Q-Sensei Scholar	148
	WorldWideScience	152

8 A comparative analysis **159**

Functioning 159

Structure 162

Coverage 163

Searching 175

A heterogeneous sample 178

9 Final remarks **179**

References **183**

Index **193**
